

People Group Program Management

Overview

Program Managers in the People Group drive alignment, measurement, and execution of our most impactful business objectives and deliverables. They keep our division organized, on track and connected through effective project management while maintaining agility and cross-functional collaboration.

Key Competencies

Regardless of the team, our Program Management key competencies are consistent to ensure the function at its core remains aligned. While the job families remain the SSOT for roles across GitLab, a few key competencies and behaviors to expect from all Program Managers within the People Group are:

Key Competency	Behavior
-----	-----
Subject matter expertise	Guides programs within their functional area
Effective communication	Provide regular project status updates and project visibility to stakeholders
Growth mindset	Drive continuous improvement through retrospectives and optimization
Change management	Facilitate pivots and timeline adjustments effectively
Stakeholder management	Keep teams aligned and accountable for executing deliverables
Strategic planning	Ensures work aligns with the division's and organization's overall goals
Program methodologies	Document processes, manage project plans and mitigate risks

Note: Company-wide competencies can be referenced here and company-wide job frameworks can be referenced here. The competencies outlined above are intended to complement these existing artifacts, not replace them.

Collaboration Framework

When multiple Program Managers work on the same project:

- The Program Manager from the DRI team leads end-to-end management
- Other Program Managers partner from their team's prospective
- Close Collaboration ensures unified execution
